Project Scope:

Tilcon New York, Inc. (Tilcon) is an integrated materials company with multiple NY and NJ operations that include quarries, asphalt plants, recycling plants, water terminals and a heavy highway construction division. LAN has provided environmental permitting and regulatory compliance services for twelve (12) Tilcon facilities that consist of quarries and asphalt plants. As part of these services, LAN has prepared Stormwater Pollution Prevention Plans (SPPP's) and Spill Prevention Control and Countermeasure (SPCC) Plans in a uniform format for convenience and ease of reference for Tilcon personnel that work at multiple facilities. LAN provides training to Tilcon personnel on the requirements of the SPPP and SPCC Plans annually and at the time of plan preparation.

Additionally, LAN has prepared applications for several Tilcon facilities for authorization to discharge under New Jersey Pollutant Discharge Elimination System (NJPDES) permits. LAN has also assisted Tilcon in understanding and complying with the requirements of the new NJPDES Mining and Quarrying General Permit. LAN collects stormwater discharge samples at one Tilcon facility in accordance with the NJPDES permit requirements for that facility. Additionally, LAN has worked with Tilcon and the New Jersey Department of Environmental Protection (NJDEP) to find site specific compliance solutions.

Services Performed:

- SPPP & SPCC Plan Preparation and Training
- Collecting Stormwater Discharge Samples
- Preparing Requests for Authorization under NJPDES Permits
- Asphalt and Concrete Recycling Permits

Project Highlights:

- 12 Facilities
- Uniform SPPP & SPCC Plan Format Across Facilities
